📁 PROFESSIONAL EXPERIENCE

CFC

Senior Full Stack Developer

02/2026 – Present

IBM

Senior Software Engineer

06/2022 – 02/2026

VSSUT

Junior Developer

09/2020 – 02/2022

🧠 SKILLS

Java • Spring Boot • REST API •
HTML/CSS • Javascript • TypeScript •
Angular • RDBMS(Postgres, MySQL) •
RabbitMQ • GIT • Docker • CI/CD •
Jenkins • AWS • Agile • Jira • GenAI

📜 CERTIFICATES

- AWS Certified Cloud Practitioner

👤 PROFILE

Full Stack Developer with 5+ years of experience in designing, developing, and deploying scalable web applications across both backend and frontend technologies. Proficient in Java, Spring Boot, RESTful API development, React, and Angular, with strong expertise in building responsive user interfaces and robust server side systems. Experienced in working with database driven applications, message brokers, microservices architecture, and deploying scalable solutions on AWS and containerized environments. Passionate about delivering end to end software solutions, system integration, and building intelligent, efficient, and scalable applications that enhance user experience and business performance.

📁 PROJECTS

RFID-Based Inventory & Asset Management System CFC

02/2026 – Present

- Development on a scalable RFID based inventory and asset tracking system
- Collaborated on the design and implementation of RESTful APIs
- Implemented an asynchronous event driven architecture using RabbitMQ for reliable processing of RFID scan.
- Participated in building role based access control using Spring Security and JWT to support secure access for administrators, inventory managers, and staff users.
- Contributed to frontend development using Angular to deliver a responsive interface for inventory and asset tracking operations.
- Worked on Angular features using Modules, Components, Routes, Router, and Two Way Data Binding to build reusable and structured UI functionality.
- Used NgRx for frontend state management to help maintain predictable application data flow.

Technologies – Java 17, Spring Boot, Angular 17, TypeScript, REST APIs, RabbitMQ, NgRx, JPA/Hibernate, PostgreSQL, Spring Security, JWT, Git.

Employee Onboarding & Learning Management System

IBM

06/2024 – 02/2026

- Contributed to the development of a Spring Boot application to automate employee onboarding.
- Implemented user authentication and secure login using OAuth.
- Worked on building RESTful APIs for updating employee details and retrieving onboarding progress from PostgreSQL.

EDUCATION

Veer Surendra Sai University of Technology
Bachelor of Technology
2018 – 2022

BJB Jr. College
Higher Secondary Education - Science
2016 – 2018

- Assisted in integrating internal APIs with external systems such as HR, LMS, and email services using Spring Boot REST client (RestTemplate).
- Contributed to frontend development using Angular to support onboarding workflows, employee profile management, and progress tracking.
- Integrated the Angular frontend with backend REST APIs to ensure smooth data flow and responsive user experience.
- Used Git for version control and collaborative development within the team.

Technologies – Java 17, Spring Boot, Angular, TypeScript, REST API, JPA, PostgreSQL, OAuth, JUnit, Git.

IMPACT - Automated Script Migration

IBM

12/2023 – 05/2024

- Designed and implemented AI-driven solutions for automated script migration across automation tools, reducing manual effort and ensuring high translation accuracy.
- Developed a rule-based engine in Java, exposed via Swagger-based REST APIs, to define transformation logic between source and target frameworks, enabling scalable and reusable migration pipelines.
- Built and integrated AI assistants using prompt engineering (templates, chaining, fine-tuning) using Models hosted on IBM Cloud, where assistants consumed the APIs via HTTP requests.
- Integrated RabbitMQ as a messaging broker to manage asynchronous requests to AI assistants, enabling scalable, fault-tolerant orchestration of migration tasks.

Technologies - Java 17, Spring Boot, Swagger, REST API, RabbitMQ, Prompt Engineering.

Cisco SWIFT - Backend development on a helper agent tool

IBM

07/2022 – 11/2023

- Worked on analysis of business requirements, and User Stories related to development and implementation of new features.
- Involved in design, coding and unit testing of change requests.
- Provided support in the Integration and Acceptance testing of the various business and functional aspects.
- Contributed to frontend development using Angular for UI enhancements to support new feature implementation.

Technologies - Java 8, Spring Boot, Angular, Junit, Git, Agile, Scrum, Jira.

Inventory Management System

VSSUT

07/2019 – 05/2022

- Developed a Java-based inventory tracking solution with a robust backend using Spring Boot.
- Managed database operations using JPA with MySQL.
- Built RESTful APIs for managing students, teachers, and inventory.
- Implemented JWT authentication and role-based access control for secure access.
- Developed interactive UI screens in React for inventory management, including data display, user input forms using functional components and hooks.
- Built reusable components with React Router for seamless navigation, and managed form state and validation using controlled components with two way data binding patterns.
- Deployed the application using Docker on AWS EC2, ensuring scalability and reliability.

Technologies: Java, Spring Boot, React, MySQL, Hibernate, Docker, AWS, JUnit, Git.
